

### 3) "Peaceful skies"

- What proportion of aircraft (or items/artifact)  
in the NASM collection are used in war/civilian/space?

→ JSON "usage flag" category to classify type of aircraft  
- tally aircraft by type & year

1903

1918

1945

1960

present

I will use a streamgraph to visualize this data, to emphasize relative amounts of one category to another and highlight changes in proportion influenced by historical events (WW2, interwar period, space race, etc).

1) "Who has the news?"

- which states/cities had the most newspapers?  
or  
... highest # of articles?

→ small multiples map showing different years

Determine which states published the most news during the revolutionary period.  
Although better reflection of collection than of period? → could reframe question slightly

2) "Founding Father Popularity Contest"

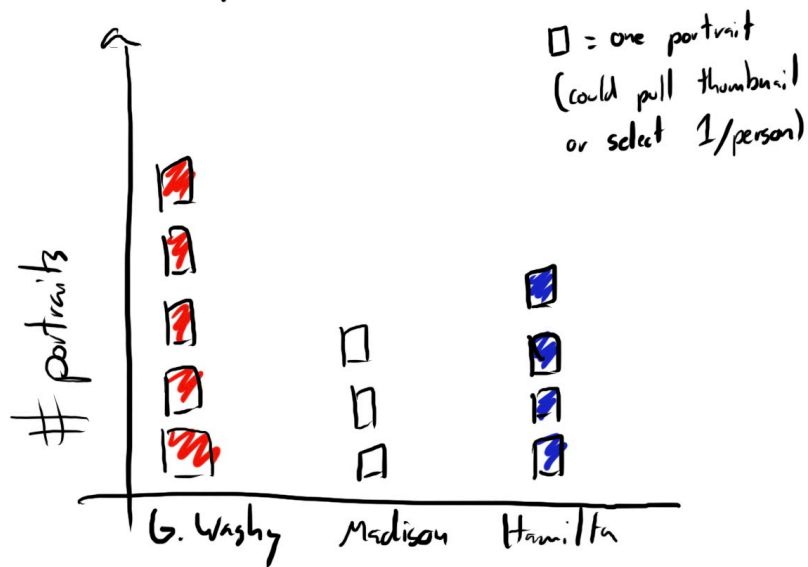

- who is the most common subject of portraits in the collection

method:

- tally sitters for portraits (available in metadata)

- record artists and year (for further subdividing)

at its simplest:

→ eventually could become similar to Monzkabinett coins? Portraits sortable by metadata
